Aminata Dia

Product Manager

Phone : +336 87358630
Email : aminatalissadia@gmail.com
Address : 10 rue de la ferme, 95000 Neuville-sur-Oise
Linkedin : https://www.linkedin.com/in/aminata-lissa-dia/
Portfolio : https://amynata.github.io/pm-portfolio/

Builder-minded PM (Engineer) scaling AI products. From industrializing MLOps at Preligens to launching LLM observability at Decathlon. I bridge technical depth with real member needs, translating complex systems into clear product decisions that solve real user problems.

Education

2024
Lead Product Manager - Certified
Thiga Academy

2023 - 2024
Product Manager
Maestro

2011 - 2016
Master Degree in Computer Science
Spc in Embedded System
Graduated with Honnored
ESIEE PARIS - Engineering School

Skills

Certifications

Tools

Knowledge in

- Data Engineering
- MLOps | IA | LLM
- Embedded Systems
- Languages Java | C | C++ | C# | SQL

And more if necessary ....

Mains Qualities

Pugnacious **Curious**
Multi-Disciplinary **Dynamic**

Personal Interests:

Experience

2024 - now
Decathlon Digital I Paris, France
Digital Product Manager, Data Observability - Data Platform

Mission : Building the trust layer of the Data Platform to enable 20+ squads to access, understand, and trust their data at scale. :

- **Led the end-to-end delivery** of a **greenfield Data Cockpit**, centralizing data quality, lineage, and metadata into a single internal product.
- **Reduced** "Time to Data" by at least 50%: Integrated **LLM capabilities** for natural language queries; transitioned technical teams from manual audits to instant data discovery.
- **Owned Strategy & Roadmap:** Managed high-ambiguity trade-offs for Data Lineage and Quality, aligning stakeholders through efficient communication (Confluence, Gemini) to eliminate recurring meetings
- **Builder-First Discovery**: Prototyped AI features and UX flows using **Replit**, validating product hypotheses faster and reducing dependencies on engineering resources.
- **Industrialized Product Ops with AI**: Leveraged LLMs and automation (Jira, Airtable) to capture **user feedback** and improve delivery predictability
- **Data-Driven Decision Making**: Implemented product analytics (**Datadog**) to track adoption and behavior, shifting the roadmap towards high-impact member needs

2021 - 2024
Preligens I Paris, France
AI Factory Product Manager, Product

Mission : Industrialize AI production at scale to bridge the gap between research and production-grade systems in a fast-growing defense tech environment.

- Built and scaled, **with engineering teams**, an AI Factory framework enabling 12,000+ model configurations while maintaining **95–98% production accuracy**
- Accelerated experimentation by **4x** by introducing, with **data scientists**, automated parameter search to validate more hypotheses in less time
- **Reduced time-to-market** by standardizing MLOps workflows, in collaboration with engineering, moving from ad-hoc research to a predictable **6-week** release cycle
- Owned product roadmap in a high-growth, high-ambiguity environment, **aligning** multidisciplinary stakeholders
- Drove **adoption** across teams by building onboarding and documentation, enabling faster ramp-up for data scientists

2020 - 2021
Softbank Robotics I Issy-les-Moulineaux, France
System Engineer, Product Architecture

Mission: Designing and structuring complex robotic systems to ensure consistency and traceability across a fleet of many robots.

- Designed system architecture (**operational** & **functional** views) for humanoid robots, ensuring consistency from design to production
- **Built** and **maintained** tools and documentation enabling end-to-end traceability across product development and validation
- Supported **qualification** and **validation** strategies in a high-reliability environment
- Facilitated cross-functional collaboration through system engineering practices and workshops

2019 - 2020
Softbank Robotics I Issy-les-Moulineaux, France
Functional Analyst, Product Validation

Mission: Ensuring product reliability and usability for Pepper and NAO robots through structured validation processes.

- **Defined** user stories, acceptance criteria, and success metrics for robotic features
- Reduced functional bugs **by 15%** before mass production through improved validation processes
- Introduced best practices for technical and functional specifications across teams, improving alignment
- Led **cross-functional** validation cycles, translating complex system behaviors into reliable product requirements

2017 - 2019
Fujitsu France, DTS I Asnières-sur-Seine, France
IT Engineer, Graduate Leadership Program

2016 - 2017
Samsung Electronics France I Saint-Ouen, France
Mobile Quality Engineer, Quality Assurance
