Aminata Dia

Product Manager

Phone : +336 87358630 **Address :** 10 rue de la ferme, 95000 Neuville-sur-Oise
Email : aminatalissadia@gmail.com **Linkedin :** https://www.linkedin.com/in/aminata-lissa-dia/

8 years in the world of new technologies and finally finding my way in product management.
My technical background and my soft skills allow me to easily adapt and communicate with people from different backgrounds.

Education

2024
Lead Product Manager - Certified
Thiga Academy

2023 - 2024
Product Manager
Maestro

2011 - 2016
Master Degree in Computer Science
Spc in Embedded System
Graduated with Honnored
ESIEE PARIS - Engineering School

Skills

Certifications

Tools

Knowledge in

- Data Engineering
- MLOps /IA
- Embedded Systems
- Languages Java | C | C++ | C# | SQL

And more if necessary ....

Mains Qualities

Pugnacious **Curious**
Multi-Disciplinary **Dynamic**

Personal Interests:

Experience

2024 - now
Decathlon Digital I Paris, France
Digital Product Manager, Data Observability - Data Platform

The Data Observability team, part of the Data Platform, provides internal teams with capabilities to trust, trace and measure the quality of their data. The scope includes the internal products Data Lineage, Data Quality Engine and the Data Cockpit – solution built from scratch. Responsibilities include :

- Collecting and analyzing needs from data leaders and technical teams to enhance reliability and transparency.
- Owning the **product direction** and defining the Observability vision and strategy aligned with the Data Platform mission.
- **Prioritizing** and **orchestrating** delivery for Data Lineage, Data Quality and the Data Cockpit in an **Agile** environment focused on incremental value.
- **Exploring** and validating hypotheses through POCs, user workshops and early UX/UI exploration.
- Developing and structuring the Data Cockpit to measure data maturity across teams.
- Implementing Datadog to analyze user behavior and product usage, supporting data-driven decisions.
- **Collaborating cross-functionally** with engineering, operations and product stakeholders to solve complex problems and drive adoption.
- Setting up **Product Ops** automations (Jira, Jira Discovery, Airtable) and leveraging LLMs to improve delivery productivity and accelerate discovery.

2021 - 2024
Preligens I Paris, France
AI Factory Product Manager, Product

Preligens produces software that employs artificial intelligence to analyze data from multiple sources such as satellite images, infrared images and video. AI Factory industrializes AI and increases Data Scientists' productivity, enabling them to respond to use cases aligned with company strategy. The Product Manager carries the users' vision and :

- **Collects** and analyzes user needs on functional and technical topics for evolutions and corrections.
- **Collaborates** with development teams to identify needs, define and macro-estimate epics.
- Qualifies, categorizes and prioritizes user requirements.
- Contributes to building the product vision and roadmap with tech managers, architects and the Head of Product.
- Maintains an up-to-date product backlog aligned with new needs and developments.
- Represents users, Data Scientists and deployment engineers during Scrum events.

2020 - 2021
Softbank Robotics I Issy-les-Moulineaux, France
System Engineer, Product Architecture

The PA team intervenes during the product definition process. The System Engineer defines, maintains and disseminates tools and documents to ensure product consistency from design to end of life by :

- **Collecting** and analyzing stakeholders' requirements and documenting specifications.
- Architecting and modeling systems under various views (operational, functional, constructional).
- Ensuring traceability of product development and supporting qualification strategy during validation and verification.
- Fostering collaborative management by promoting system engineering methods through workshops

2019 - 2020
Softbank Robotics I Issy-les-Moulineaux, France
Functional Analyst, Product Validation

The Product Validation team intervenes during the functional validation of robotic products developed by SoftBank Robotics. The Functional Analyst ensures that the product conforms to identified use cases by :

- Conducting functional validation of robotic products with cross-functional teams.
- Defining user stories, acceptance criteria and success metrics, and validating features with the Product Owner.
- Aligning stakeholders, resolving detected bugs and ensuring compliance with functional and performance requirements.
- Introducing best practices for writing functional and technical specifications across SoftBank Robotics Europe.

2017 - 2019
Fujitsu France, DTS I Asnières-sur-Seine, France
IT Engineer, Graduate Leadership Program

2016 - 2017
Samsung Electronics France I Saint-Ouen, France
Mobile Quality Engineer, Quality Assurance
