Aminata Dia

SENIOR PRODUCT MANAGER

Phone : +336 87358630
Email : aminatalissadia@gmail.com
Address : 10 rue de la ferme, 95000 Neuville-sur-Oise
Linkedin : linkedin.com/in/aminata-lissa-dia
Portfolio : amynata.github.io/pm-portfolio

Builder-minded Senior PM (ESIEE Engineer) 10 years in tech, 5+ in AI products and internal tooling. From MLOps at Preligens to LLM-powered platforms at Decathlon, hands-on with n8n, Claude, MCP and LLMs in production daily. Former caregiver with first-hand experience of healthcare friction. I bridge technical depth with real user needs.

EDUCATION

2024
Women Leadership Program
HEC Paris

2024
Lead Product Manager - Certified
Thiga Academy

2023 - 2024
Product Manager
Maestro

2011 - 2016
Master Degree in Computer Science
Spc in Embedded System
Graduated with Honors
ESIEE PARIS - Engineering School

PERSONAL PROJECTS

Stock Automation · n8n

Built a chat-to-spreadsheet n8n workflow for a 1,500-member sports club, replacing manual Excel updates with real-time Google Sheets sync via message parsing.
Next: Telegram/WhatsApp integration.

SKILLS

Certifications

PSM | CESAM | ISTQB | MAESTRO | Thiga Academy

Tools

Miro | Replit | Notion | Jira | n8n | Claude | Cursor | Datadog

KNOWLEDGE IN

- MLOps | LLM | RAG | n8n | Claude | Gemini | MCP
- Data Engineering
- Embedded Systems
- Java | C | C++ | C# | SQL

MAIN QUALITIES

Tenacious
Curious
Stakeholder Management
Builder

Personal Interests:

Experience

2024 - now Decathlon Digital | Paris, France
Digital Product Manager, Data Observability - Data Platform
Mission : Building the trust layer of the Data Platform to enable 20+ squads to access, understand, and trust their data at scale.

- **Led the end-to-end delivery** of a **greenfield Data Cockpit**, centralizing data quality, lineage, and metadata into a single internal product.
- **Reduced** "Time to Data" by at least 50%: Integrated **LLM capabilities** for natural language queries; transitioned technical teams from manual audits to instant data discovery.
- **Owned Strategy & Roadmap:** Managed high-ambiguity trade-offs for Data Lineage and Quality, aligning stakeholders through efficient communication (Confluence, Gemini) to eliminate recurring meetings
- **Industrialized Product Ops with AI:** Leveraged **n8n workflows, Claude and LLMs** to automate feedback capture (Jira, Airtable) and improve delivery predictability
- **Builder-First Discovery:** Prototyped AI features and UX flows using **Replit**, validating product hypotheses faster and reducing dependencies on engineering resources.
- **Data-Driven Decision Making:** Implemented product analytics (**Datadog**) to track adoption and behavior, shifting the roadmap towards high-impact member needs

2021 - 2024 Preligens | Paris, France
AI Factory Product Manager, Product
Mission : Industrialize AI production at scale in a regulated defense tech environment, bridging the gap between research and production-grade systems.

- Built and scaled, with engineering teams, an AI Factory framework enabling **12,000+ model configurations** while maintaining **95–98% production accuracy**
- Accelerated experimentation by **4x** by introducing, with data scientists, automated parameter search to validate more hypotheses in less time
- **Reduced time-to-market** by standardizing MLOps workflows, in collaboration with engineering, moving from ad-hoc research to a predictable **6-week** release cycle
- Owned product roadmap in a high-growth, high-ambiguity environment, **aligning** multidisciplinary stakeholders
- Drove **adoption** across teams by building onboarding and documentation, enabling faster ramp-up for data scientists

2020 - 2021 Softbank Robotics | Issy-les-Moulineaux, France
System Engineer, Product Architecture
Mission: Designing and structuring complex robotic systems to ensure consistency and traceability across a fleet of many robots.

- Designed system architecture (**operational** & **functional** views) for humanoid robots, ensuring consistency from design to production
- **Built and maintained** tools and documentation enabling end-to-end traceability across product development and validation
- Supported **qualification** and **validation** strategies in a high-reliability environment
- Facilitated cross-functional collaboration through system engineering practices and workshops

2019 - 2020 Softbank Robotics | Issy-les-Moulineaux, France
Functional Analyst, Product Validation
Mission: Ensuring product reliability and usability for Pepper and NAO robots through structured validation processes.

- Defined user stories, acceptance criteria, and success metrics for robotic features
- Reduced functional bugs by **15%** before mass production through improved validation processes
- Introduced best practices for technical and functional specifications across teams, improving alignment
- Led **cross-functional** validation cycles, translating complex system behaviors into reliable product requirements

2017 - 2019 Fujitsu France, DTS | Asnières-sur-Seine, France
IT Engineer, Graduate Leadership Program

2016 - 2017 Samsung Electronics France | Saint-Ouen, France
Mobile Quality Engineer, Quality Assurance
